In C, `stdlib.h` is a header file that provides access to a variety of standard library functions. These functions perform essential tasks like:

- Memory allocation: `malloc()`, `calloc()`, `realloc()`, `free()`
- Process control: `exit()`, `abort()`, `atexit()`
- Conversions: `atoi()`, `atol()`, `atof()`
- Random number generation: `rand()`, `srand()`
- Sorting and searching: `qsort()`, `bsearch()`
- Other utilities: `abs()`, `div()`, `getenv()`

To use the functions declared in `stdlib.h`, you need to include it at the beginning of your C program:

C

```
#include <stdlib.h>
```

Example:

C

```
#include <stdio.h>
#include <stdlib.h>

int main() {
    int num = 1234;

    // Convert string to integer
    int converted = atoi("123");

    // Generate a random number between 1 and 100
    int random = rand() % 100 + 1;

    printf("Converted number: %d\n", converted);
    printf("Random number: %d\n", random);

    return 0;
}
```
