

# Implicit return type int in C

Last Updated : 02 Jun, 2017

Predict the output of following C program.

```
#include <stdio.h>
fun(int x)
{
    return x*x;
}
int main(void)
{
    printf("%d", fun(10));
    return 0;
}
```

Output: 100

The important thing to note is, there is no return type for fun(), the program still compiles and runs fine in most of the C compilers. In C, if we do not specify a return type, compiler assumes an implicit return type as int. However, C99 standard doesn't allow return type to be omitted even if return type is int. This was allowed in older C standard C89.

In C++, the above program is not valid except few old C++ compilers like Turbo C++. Every function should specify the return type in C++.

Summer-time is here and so is the time to skill-up! More than 5,000 learners have now completed their journey from **basics of DSA to advanced level development programs** such as Full-Stack, Backend Development, Data Science.

And why go anywhere else when our [DSA to Development: Coding Guide](#) will help you master all this in a few months! Apply now to our [DSA to](#)

[Development Program](#) and our counsellors will connect with you for further guidance & support.
